

Section 3.16 Noise

Comment 3.16-1-PHT: Like some of the other speakers, I live on Old Route 22. I appreciate the quiet nature of that road and I do not want to see that significantly changed. I would like to know more about how we are going to address that. [Matthew Anderson, November 17, 2007 Public Hearing Transcript, page 125]

Response 3.16-1-PHT: The noise analysis for the Silo Ridge project (see Section 3.16) indicated that, based on anticipated traffic levels in the “Build” scenario and the types of land uses that are proposed, the project would not noticeably increase noise levels anywhere in the vicinity of the project site. Old Route 22 is nearly ½-mile from the project site’s eastern boundary and is not expected to experience any perceptible increase in noise.
